Hafnium Oxide Water-Based Coating

Type H is a Hafnium Oxide (HfO₂) coating which uses a thermodynamically stable Yttrium Aluminum Garnet (YAG, 3Y₂O₃*5Al₂O₃) binder in order to attain very high use temperatures and stability. After firing to temperatures >600 C, the coating composition is 95% HfO₂ and 5% YAG. Type H yields a well-bonded Hafnium Oxide coating when applied to most substrates and is non-reactive with many ceramics and alloys, solid or molten. Hafnium Oxide has a "Normal Total Emittance" of 0.8 to 0.9 up to 2000 C, which is a quite unique property of being near blackbody, and has a very high dielectric constant.

Key Attributes

- Non-reactivity with solid or molten metals/alloys
- Upper use limit temperature expected to be over 1900 C in all atmospheres
- Unique YAG-bonded HfO₂ composition: 95% HfO₂ and 5% YAG after firing to T > 600 C
- High emissivity, high thermal neutron capture cross-section, and high dielectric constant of Hafnium and HfO₂
- Fired (T > 600 C) coating can be lightly burnished to produce a slick, lubricative finish

Ideal Use

- Very-high-temperature molten metal processing and transport
- Aerospace, nuclear, and other demanding applications
- Barrier coating to prevent diffusion, reactions, and sticking of parts during heat treating

Use Notes

- 1. Resuspend if needed.
- 2. Use full strength, or dilute as desired with distilled or deionized water.
- 3. Clean surfaces to be painted of any oils, dirt, scale, etc.
- 4. Apply 1-2 layers by brush or spray, drying after each layer.
- 5. Allow to thoroughly dry before use.

Specifications

Active Ingredient HfO₂ Max Use Temperature All Atmospheres >1900 C (> 3452 F)

Sizes and colors

Type H is a white colored paint. Standard Size: 4 oz. Nalgene 8 oz. Nalgene

Safety Information

- Consult SDS before use.
- Avoid breathing of spray/vapors.
- For Industrial Use only.

CAUTION: DO NOT CONTACT WET COATINGS WITH MOLTEN METAL
